Job Analysis

Job Analysis Report

=====

Skills/keywords found in job posters:

- python (mentions: 2)
- machine learning (mentions: 2)
- data preprocessing (mentions: 2)
- github (mentions: 2)
- git (mentions: 3)
- api (mentions: 2)
- sql (mentions: 2)
- communication (mentions: 2)
- problem solving (mentions: 1)

Skill Gap

Skill Gap Report

=====

Match Score: 66.67%

Total job keywords: 9

Total resume keywords: 11

Matched Skills:

- python
- github
- git
- api

- communication
- problem solving

Missing Skills:

- machine learning
- data preprocessing
- sql

Tailored Resume Suggestions

Tailored Resume Suggestions

=====

Suggested improvements according to job posters:

- Add measurable evidence (tools, outcome, impact) for python.
- Add measurable evidence (tools, outcome, impact) for machine learning.
- Add measurable evidence (tools, outcome, impact) for data preprocessing.
- Add measurable evidence (tools, outcome, impact) for github.
- Add measurable evidence (tools, outcome, impact) for git.
- Add measurable evidence (tools, outcome, impact) for api.
- Add measurable evidence (tools, outcome, impact) for sql.
- Add measurable evidence (tools, outcome, impact) for communication.
- Add measurable evidence (tools, outcome, impact) for problem solving.

Suggested resume bullets:

- Built Python-based projects and documented approach/results clearly.
- Used Git/GitHub for version control, issue tracking, and collaboration.
- Applied structured problem-solving in coursework and practical projects.

Skills to improve before applying/interview:

- machine learning
- data preprocessing
- sql

Interview Questions

Interview Questions

=====

Technical questions based on job posters:

- Explain your understanding of python.
- Describe one project where you used python.
- Explain your understanding of machine learning.

- Describe one project where you used machine learning.
- Explain your understanding of data preprocessing.
- Describe one project where you used data preprocessing.
- Explain your understanding of github.
- Describe one project where you used github.
- Explain your understanding of git.
- Describe one project where you used git.
- Explain your understanding of api.
- Describe one project where you used api.
- Explain your understanding of sql.
- Describe one project where you used sql.
- Explain your understanding of communication.
- Describe one project where you used communication.
- Explain your understanding of problem solving.
- Describe one project where you used problem solving.

HR and behavioral questions:

- Tell me about yourself.
- Why are you interested in this role?
- Describe a challenge and how you solved it.
- What are your strengths and areas for improvement?

Questions inspired by KB/slides:

- How would you explain this point in an interview: FILE: interview_preparation_notes.txt?
- How would you explain this point in an interview: ■Interview preparation notes:?
- How would you explain this point in an interview: Explain STAR method for behavioral questions.?
- How would you explain this point in an interview: Be ready to discuss end-to-end project lifecycle.?
- How would you explain this point in an interview: Clarify difference between overfitting and underfitting.?
- How would you explain this point in an interview: Explain data preprocessing pipeline and feature engineering choices.?
- How would you explain this point in an interview: Demonstrate SQL joins with practical examples.?
- How would you explain this point in an interview: FILE: job_fair_slides_notes.txt?
- How would you explain this point in an interview: ■Job fair slides notes:?
- How would you explain this point in an interview: Keep concise and impact-oriented resume bullets.?

Preparation Plan

Preparation Plan

=====

Day 1-2: Strengthen missing skills

- Study and practice: machine learning
- Study and practice: data preprocessing
- Study and practice: sql

Day 3: Review your demonstrated strengths

- Prepare project examples for: python
- Prepare project examples for: github
- Prepare project examples for: git
- Prepare project examples for: api
- Prepare project examples for: communication
- Prepare project examples for: problem solving

Day 4: Mock interview

- Practice technical + HR questions for 30-45 minutes.

Reminders

Application Reminders

=====

- APP-001: Interview scheduled for Junior AI Engineer Intern at ABC Tech on 2026-04-28. Next action: Revise Python, ML basics, and explain projects clearly.
- APP-001: Follow-up date set to 2026-04-28.
- APP-002: Application submitted to DataWorks. Follow up on 2026-04-28 if no response.
- APP-002: Follow-up date set to 2026-04-28.
